SUMMARY

I am Masanso David, a software and systems engineer with hands-on experience in Android development, artificial intelligence, networking, and low-level systems engineering. My key skills include Java, Kotlin, Python, C, web development, Linux, Android, networking, and database systems. I have built projects including an offline AI system, LAN-based e-commerce platform, garbage management system, custom Linux kernel, custom AOSP build, and Android applications. My career goal is to design and develop reliable, innovative software and systems that solve real-world problems while continuously advancing my expertise in software engineering and emerging technologies.

EXPERIENCE

Jan 2025 — Current

Network engineer

MASA ENTERPRISE, Mukono, Namanve, Uganda

I engineer and run network infrastructure, maintain business hardware and software systems, and drive technical marketing to support service growth.
